

## quality control

Scheck is constantly upgrading quality programs to assure you the best results possible. We are authorized by the American Society of Mechanical Engineers for assembly of Power Boilers (S), manufacture of Unfired Pressure Vessels (U), and fabrication and installation of pressure piping (PP). In addition, we are authorized by the National Board of Boiler and Pressure Vessel Inspectors to perform repairs and/or alterations to power boilers and pressure vessels.

## project tracking

Our exclusive Scheck Trac Projects Control and Tracking System provides objective quality data throughout a project's life cycle. Our clients know they receive the highest quality work, and the proof is in the numbers. Scheck Trac captures craft hours expended on activities throughout the project. Activities are categorized and analyzed to determine trends and corresponding corrective measures – keeping budgets and timelines on track.
